Crooked Creek Lake Park boasts several trails that traverse a variety of habitats around the lake and the surrounding area owned and managed by the USACE (United States Army Corps of Engineers). Small numbers but a nice assortment of waterfowl stop to use the lake during migration, and the beach and surrounding muddy edges host the occasional shorebird. The creek itself flows from the north and there are several spots along the creek where birds such as Belted Kingfishers, Great Blue and Green Herons, and Common Mergansers may be found. Summer birding is excellent with opportunities to find a nice variety of nesting species. Both spring and fall have yielded interesting migrants.

Stop in the park office to pick up a printed Crooked Creek map and a small hand-written map of trails that is available in the lobby. Portions of Baker Trail pass through Crooked Creek. An Environmental Learning Center, operated by the Armstrong Educational Trust, and a Horse Park, operated by Manor Twp. and the Armstrong County Horsemen's Association, are also located within the park. So grab your binoculars, hike the trails, and enjoy the park.

This list of 173 species was compiled in June 2010 by Marjorie Van Tassel and Margaret Higbee using data collected by various members of the Todd Bird Club, employees of USACE, and other volunteers. Photo by Marge Van Tassel. Revised January 2011.
